Agenda

Summary

Nuxland is a platform dedicated to enhancing collaboration within the open science and open-source community. It acts as a dynamic hub for project creators and skilled collaborators, addressing the challenge of efficiently connecting individuals with shared interests. With features such as simplified project funding, robust collaboration tools, universal authentication, and real-time communication, Nuxland empowers users to innovate, showcase their expertise, and work together seamlessly. By recognizing contributions through customizable rewards, Nuxland fosters a thriving community of innovators, where groundbreaking projects come to life. Nuxland is more than a platform; it's a movement that reshapes how we collaborate, create, and innovate in the world of open science.

A Marketplace for Open Science Projects

Problem
Statement

Our Solution

Realtime chat

Real-time chat accelerates communication, ensuring swift collaboration and engagement

Video Conferencing

Enhanced video user interface, with features to facilitate a smooth experience, and productive video interactions.

Realtime File sharing

File sharing simplifies collaboration, providing instant access and updates to documents for efficient teamwork.

Funding system

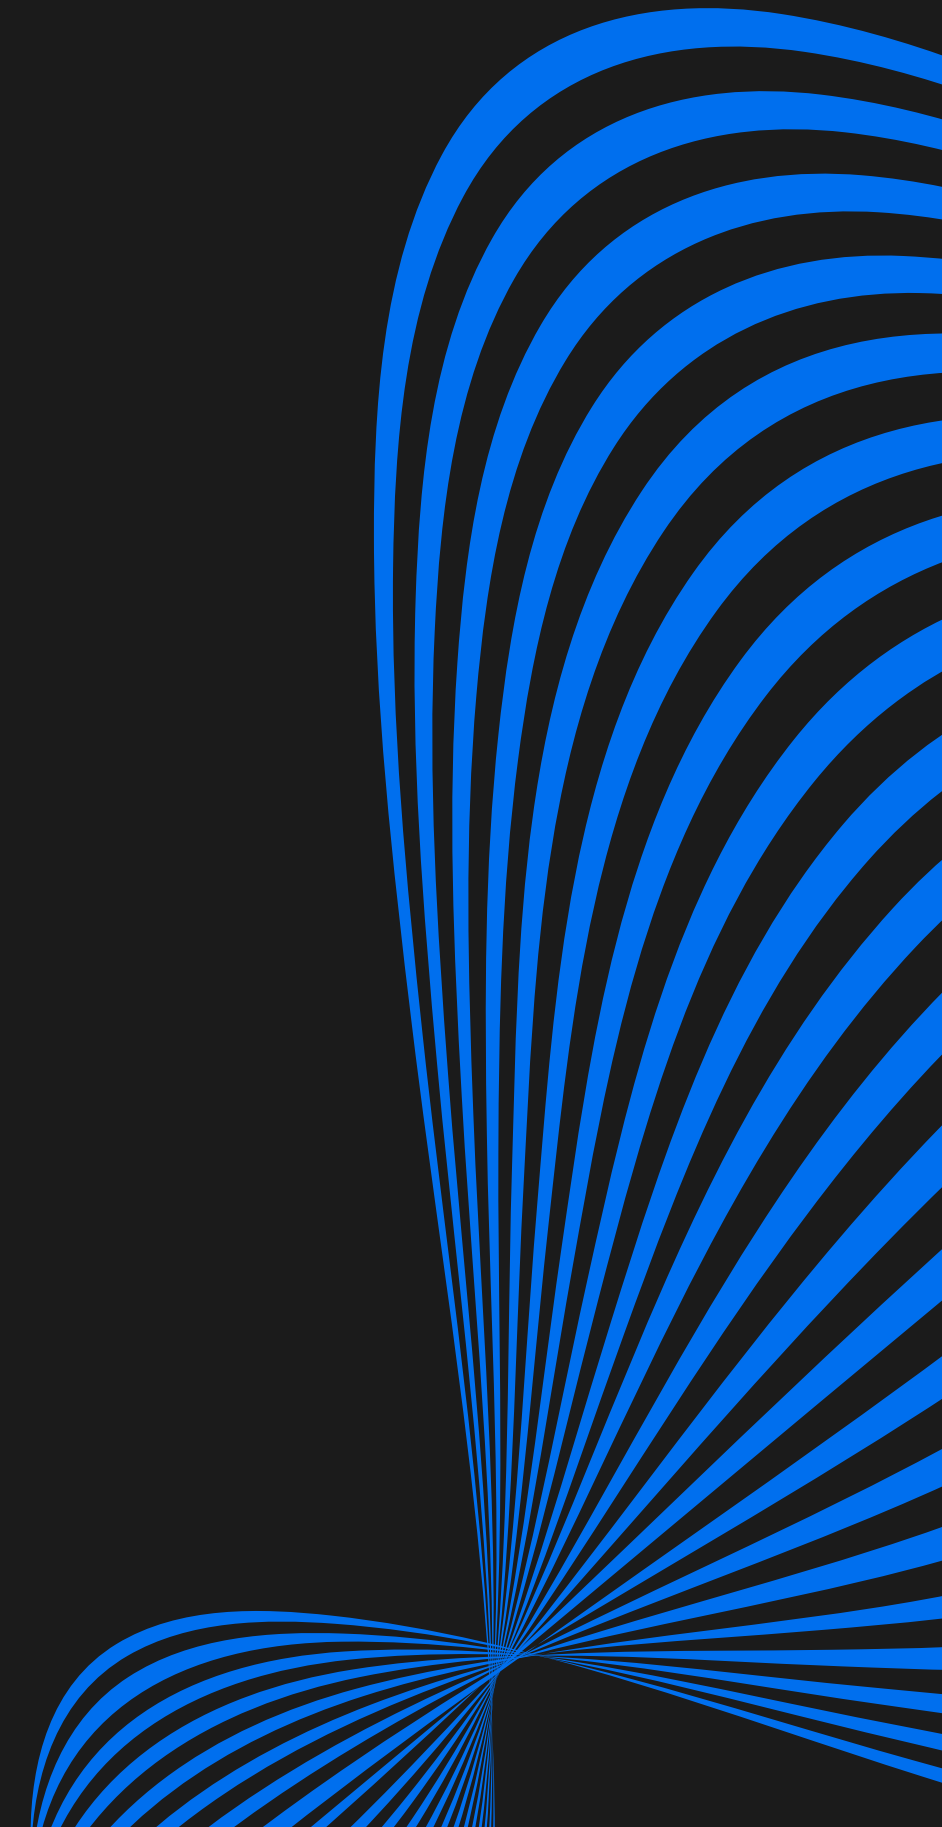

Allowing creators to set up funding pages, making it easier to secure the funds needed for their initiatives.

Project management

Robust project management features like progress tracking, task assignment, roles, and scheduling, all in one interface

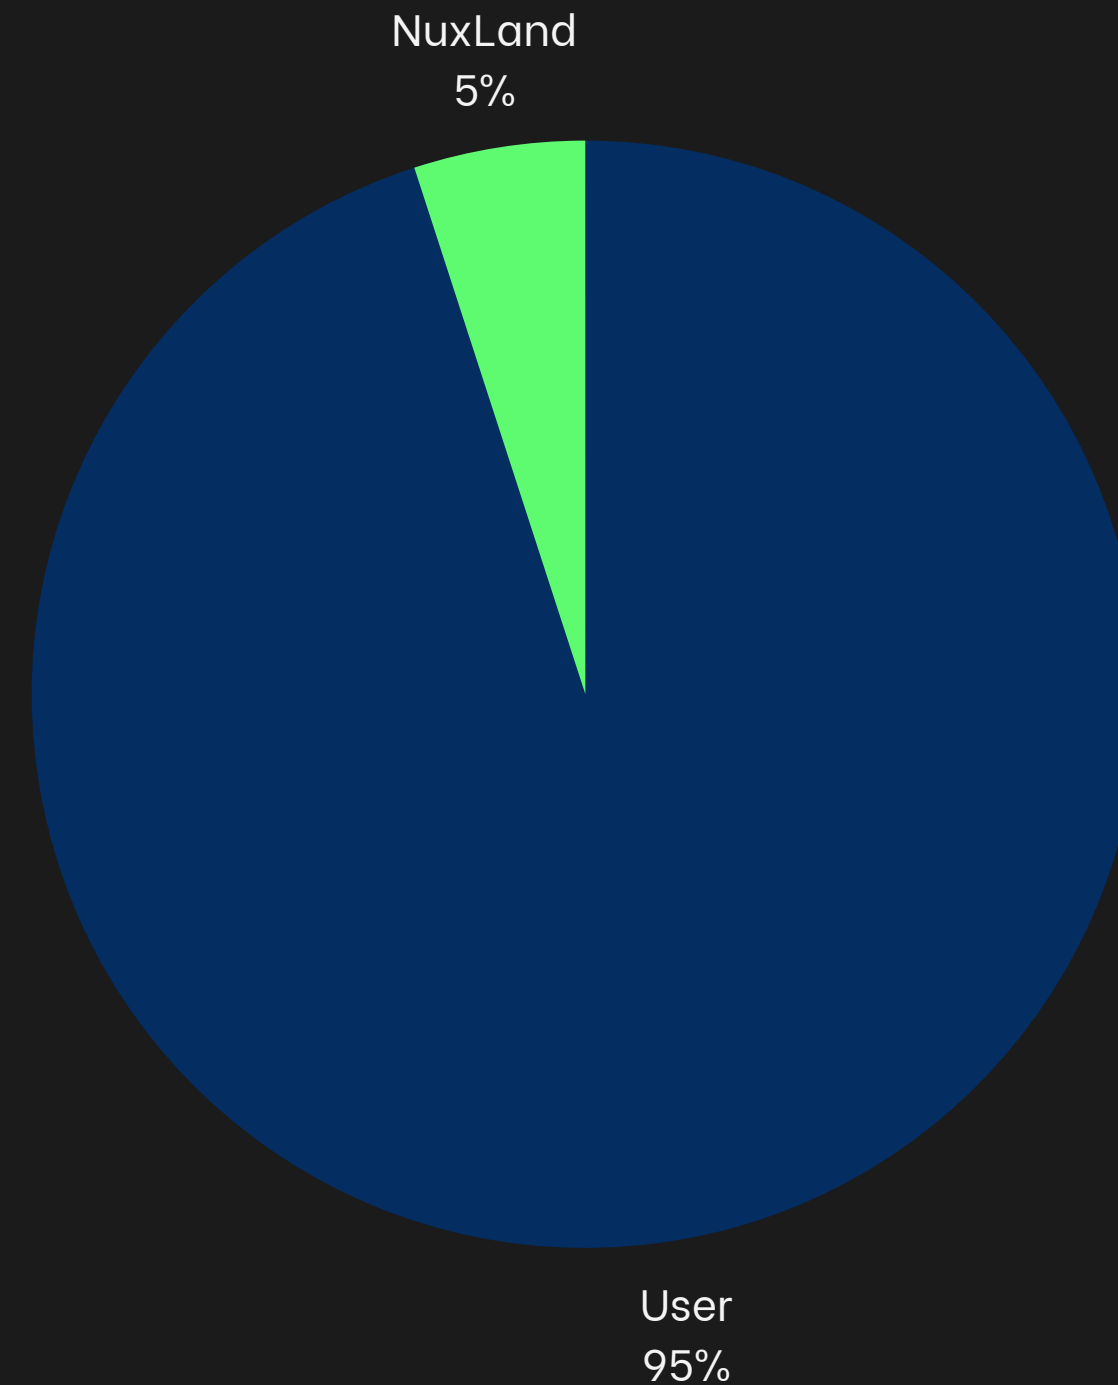

Reputation System

Receive custom rewards, including badges, and NFTs, as recognition for their hard work.

Revenue Model

Our priority to user experience, so we have only a single revenue stream.

When Funders fund the project, we keep 5% as our fees and transfer 95% of the funds to the project owner

Future Plans

- Add more tools like jamboard for better collaboration
- Implementation of Git Version history -like feature
- Multiple social Authentication system like twitter, apple id
- Certification and NFT badges which would be used for on-chain reputation
